SKILLS

Software

LIBRARIES, PACKAGES, FRAMEWORKS, & TOOLS

- NumPy+SciPy+Matplotlib
- TensorFlow/Keras
- Linux and shell scripting
- Git and Subversion
- Eclipse+PyDev
- Scikit-Learn
- Python multiprocessing
- Amazon Elastic Compute Cloud
- Apache+MySQL

Languages

PROGRAMMING & MARKUP

- Python
- MATLAB
- \LaTeX
- C/C++
- Java
- HTML+Javascript

Selected Graduate Classes

- Computer Vision
- Machine Learning and Artificial Intelligence
- Foundations of Probabilistic Modeling
- Probability Theory
- Mathematical Neuroscience
- Computation and Coding in Microcircuits
- Neuroscience
- Applied Dynamical Systems
- Mathematical Analysis of Massive Data Sets
- Introduction to Nonlinear Dynamics
- Chemical Reactor Engineering
- Mathematical Methods for Engineering Analysis
- Software Engineering for Scientific Computing

Selected Undergraduate Classes

- Mathematical Statistics with Applications
- Process Dynamics & Control
- Introduction to Linear Algebra
- Human Anatomy & Physiology
- Applied Differential Equations

Teaching

AT PRINCETON; AS ASSISTANT INSTRUCTOR

- Chemical & Biological Engineering Lab
- Differential Equations

Other Skills and Interests

- Arduino and Raspberry Pi
- Autonomous robotics with Robot Operating System (ROS)
- Small electronics manufacture
- Solo and orchestral violin performance

PROJECTS

1:10 scale autonomous vehicles (AVs)

Built a series of differential-drive and Ackermann rovers with LIDAR, and depth cameras, wheel encoders, and IMU; building experience in hardware, low-level embedded firmware, Robot Operating System (ROS) driver software, and high-level perception and planning software.

Simulation of circadian rhythms

Contributed to a successful \$1.8MM grant for multi-university research project. Implemented core simulation, coarse-graining, and pseudo-arclength continuation. Presented at AIChE in 2016. (Collaboration with Wash. U. St. Louis and U. Mass Amherst.)

Neural approximation of dynamical systems

Recast existing neural differential equation (DE) methods for time series analysis as recurrent networks, including extensions to CNNs for learning PDEs. Applied an unconventional loss for learning DEs with a conserved quantity. Implemented custom gradients for training neural networks with constraints.

Unsupervised learning (UL) for dynamical systems

Used UL to characterize the slow manifold underlying high-dimensional simulation dynamics. Helped develop a new variational autoencoder and applied it to end-to-end robotic localization (collaboration with Yale and The Technion).

Extraction of an emergent space and partial differential equation (PDE) underlying coupled oscillators

Used UL to obtain an pseudo-spatial ordering for a simulation of coupled biological neurons. Supervised a graduate student in using a CNN to train a PDE to approximate the dynamics.

Course in computer vision and control for AVs

Helped develop and teach a recurring summer course for high school and freshman students on using ROS, OpenCV, and convolutional neural networks (CNNs) to follow a road and stop at a traffic sign.

EDUCATION

Princeton University

M.A. AND PH.D

Chemical and Biological Engineering
Advised by Prof. Yannis Kevrekidis

The University of Alabama

B.S., MAGNA CUM LAUDE

Chemical and Biological Engineering, minor in Mathematics
Advised by Prof. Eric Carlson and Prof. Ryan Earley

AWARDS

- Princeton Program in Plasma Science and Technology research and academic fellowship
- National Science Foundation research fellowship
- William R. Schowalter fund for scholarly conferences
- National merit finalist scholarship
- University honors program
- University president's list
- $\Phi\chi\Sigma$, $\Omega\chi E$, and $T\beta\pi$ honor societies
