EDUCATION & TRAINING

- **Johns Hopkins University** — ***2020 - 2024***
  Postdoctoral Fellow — *Chemical and Biological Engr.*
- **The Massachusetts Institute of Technology** — ***2018 - 2020***
  Postdoctoral Associate — *Mechanical Engr.*
- **Princeton University** — ***2012 - 2018***
  Ph.D. & Masters, Chemical and Biological Engr.
- **The University of Alabama** — ***2008 - 2012***
  Bachelor of Science in Chemical and Biological Engr.; Minor in Math

PROFESSIONAL EXPERIENCE AND RESEARCH AREAS

Amgen — *Cambridge, MA*

DATA SCIENTIST — *11/2024-Present*

- ***Mechanistic Modeling of Lyophilization and Filling***
  - Designed and advocated a real-time lyophilization humidity digital twin using sequential Bayesian state estimation.
  - Developed and released a mechanistic process-modeling tool and digital twin for heat and mass transport modeling in lyophilization, enabling in-silico design of experiments and unit operation scale-up analysis.
  - Calibrated model parameterizations across seven products and five vial types using real-world datasets; established validation and verification pipeline.
  - Contributed to a growing first-principles mechanistic model of peristaltic filling, used by a broad internal customer base of subject matter experts for recipe design and process optimization.
  - Implemented pipelines to ingest high-volume accelerometer and flow data into data lake and co-designed a new product for the semantic data fabric.
  - Contributed to five major department-wide agile sprint demos and three company-wide package releases, deploying containerized application and versioned library to private artifact registries.
  - Defined PAT-aware data schemas and interfaces to integrate sensor/controller streams with mechanistic and statistical models, enabling automated model-based experimentation and risk assessment.
  - Led V&V activities and authored reproducible model qualification artifacts to support regulatory filings and cross-site deployment of digital twins.
- ***Hybrid Mechanistic+Black-box Modeling of CHO Cell Metabolism***
  - Evaluated vendor offerings for Gaussian process-based time series system identification tools.
  - Advised on the refinement and efficient implementation of a hybrid CHO metabolism model integrating explicit reaction kinetics with constraint-based flux-balance analysis. Model is used for online and offline optimal model-based control of dynamic feeding to improve productivity profiles in large-scale production bioreactors.
- ***Agile Development Automation Initiative***
  - Ingest handwritten notes using a multimodal large-language model on Databricks.
  - Accelerated sprint planning using the GitLab and Microsoft Graph APIs.

University of Massachusetts — *Lowell, MA*

RESEARCH SOFTWARE ENGINEER — *1/2024-11/2024*

- ***Model Predictive Control of CHO Bioreactor***
  - Secured grant as PI to develop a central data lake for an NIH-seeded academic/industry consortium.
  - Designed and validated model-based process control strategies for perfusion CHO production, combining first-principles unit-operation models with data-driven MPC implementations; conducted pilot wet-lab execution and controller tuning.
  - Implemented and integrated PAT streams into SBML/JSON digital twins and soft-sensors; used these for model identification, real-time optimization, and fault detection.
  - Authored reproducible workflows and tooling in Matlab, Python, and SQL to support model development, qualification, and hand-off to manufacturing engineering.

Johns Hopkins University — *Baltimore, MD*

POSTDOCTORAL FELLOW — *2/2020-1/2024*

- ***Neural Differential Equations and Time-Series***
  - Created a GUI for Bayesian experimental design; mentored team members on its use and maintenance.
  - Improved accuracy of backpropagation and convergence time of PyTorch neural stochastic differential equation training.
  - Advanced state-of-the-art for neural DEs for time-series; incl. Hamiltonian systems, neural PDEs, and new theory on scaling laws; resulting in 9 publications and 10 conference presentations.
  - Cut RNN inference burn-in from 25 to 5 samples using manifold learning.
  - Led a team of biophysics and ML experts in creating a suite of simulation tools for CHO metabolism, including custom gradients for nets with constraints.

- ***Robotic Perception and Control***
  - Developed a variational autoencoder for end-to-end robotic localization.
  - Trained a U-net on both open and custom datasets for real-time (>10hz) on-board semantic segmentation of drivable space.

The Massachusetts Institute of Technology *Cambridge, MA*

POSTDOCTORAL ASSOCIATE *3/2018-2/2020*

- ***Nonlinear dynamics in neuroscience and bioprocessing***
  - Wrote object-oriented library for fine- and coarse-grained simulations of neuronal dynamics, probing bifurcation and resonance behavior of a mammalian circadian rhythm model.
  - Coauthored successful application for a $1.8M NIH-led industry-academic partnership grant for a new bioreactor simulation.
- ***Autonomous Vehicle Design and Pathfinding***
  - Developed a model AV with firmware-level speed sensing and control commanded by checksummed bus communications.
  - Simulated a comfort-optimized (jerk-minimizing) path planner with two-lane-ahead planning at 47 mph, and implemented a model-predictive path follower achieving 67 ms latency (IPOPT, CppAD) in C++ for real-time application.

Princeton University *Princeton, NJ*

NSF RESEARCH ASSISTANT *9/2012-3/2018*

Built a rover for Bayesian particle-filter SLAM with LIDAR using Gazebo and ROS, and a custom library for visualizing OpenCV pipelines and dynamic pruning of computational graphs. Simulated thousands of neurons in Numpy and MATLAB, and social agents in OpenMP-accelerated C++. Advised undergrads on theses ranging from power-grid opt. with Gurobi to combinatorial basis extraction.

SKILLS AND INTERESTS

- Tensorflow/Pytorch
- Aspen DMC3 Controls
- Databricks for data lakes and ML
- Python, C++, Java
- NumPy, SciPy, SymPy, Matplotlib, SKLearn
- Linux, shell scripting, and git
- OPC-UA, MODBUS/serial, and ROS
- Online optimization (IPOPT, CppAD, CasADi)
- Grammatical evolution for code generation
- Bayesian inference and probabilistic computing
- HPC with SLURM and OpenMP, and CUDA
- Differentiable physics for ML
- Mechanistic+data-driven grey-box modeling
- Retrieval-augmented generation (RAG)
- SQL(alchemy), HTML, CSS, JS, Flask, LAMP
- Classical and DL-based computer vision
- Trainee and peer mentoring
- Home automation with Arduino, Raspberry Pi, and 3D printing
- Solo and orchestral violin performance
- Windsurfing and small-boat sailing

SELECTED PUBLICATIONS

Integrated Modeling and Optim. of Secondary Drying for Pharma. Freeze-Drying Proc. ***2025 (accepted)***
Tom Bertalan, M. Maritato, A. Ganguly, W. Al Bakri, R. Tukra, B. Lacetti *AIChE 2025 (poster)*

Integrated Continuous USP Platform for Max. Productivity and Closed-Loop Controlled CQA ***2025 (accepted)***
J. Lee, Tom Bertalan, Z. Wang, Y. Choi, S. Song, H. Yamanaka, A. Rajendran, J. Han, S. Yoon *AIChE 2025*

Digital Twin-Enabled Control of Productivity and CQA in CHO Cell Cultures ***2025 (accepted)***
Y. Choi, S. Yoon, Z. Wang, Tom Bertalan, J. Lee *AIChE 2025 (poster)*

Beyond Trial-and-Error: An in silico Model for Accelerated Peristaltic Fill Recipe Development ***2025 (accepted)***
Maritato, Ingram, Sao, Heymann, Tom Bertalan, Banerjee, Icten Gencer, Ganguly, Pearson, Schlegel *AIChE 2025 (poster)*

Integ. of Bayesian Optim. and Solution Thermo. to Opt. Media Design for Mammalian Biomfg. ***2025***
N. Ndahiro, E. Ma, Tom Bertalan, M. Donohue, Y. Kevrekidis, and M. Betenbaugh *iScience*

Data-driven and Physics Informed Modelling of Chinese Hamster Ovary (CHO) Cell Bioreactors ***2024***
T. Cui, Tom Bertalan, N. Ndahiro, P. Khare, M. Betenbaugh, C. Maranas, I. Kevrekidis *Comp. & Chem. Engr.*

Some of the variables, some of the parameters, some of the times, with some things known: Identification with partial information ***2023***
S. Malani, Tom Bertalan, T. Cui, M. Betenbaugh, J. Avalos, I. Kevrekidis *Comp. & Chem. Engr.*

Development of closures for coarse-scale modeling of multiphase and free surface flows using machine learning ***2021***
C. Linares, Tom Bertalan, E. Koronaki, Jicai Lu, G. Tryggvason, I. Kevrekidis *APS Bulletin*

Coarse-grained descriptions of dynamics for networks with both intrinsic and structural heterogeneities ***2017***
Tom Bertalan, W. Wu, C. Laing, C. William Gear, and I. Kevrekidis. *Front. in Comp. Neuro.*
